Kentucky Makes Progress in Forest Preservation.

Kentucky, which is one of the chief hardwood producing states in the union, and the first state in the production of yellow poplar, is making good progress in the movement for the preservation of its forests. In 1906 the legislature enacted the law providing for the State Board of Agriculture, Forestry and Immigration. During the following winter the board asked for and received the co-operation of the United States Forest Service in a study of the forest conditions of the state. This work was begun two years ago and an examination of half the area of forest land in the state has been completed. The result of the first year's work, covering the eleven most eastern counties of the state, is published in the Kentucky Handbook, 1906-1907. The second report, now in the hands of the State Board of Agriculture, covers forty-eight counties, largely in the coal mining regions of the state. When this investigation is completed Kentucky will have an excellent inventory of its lumber resources.

The manner in the forestry problem has been approached indicates that the people of the state realize that the ultimate solution of the impending timber scarcity must, for the farmer, depend largely on how he handles his individual timber resources, and that there is no better way than for him to consider the woodlot as a bank account, using the interest which is constantly accruing, but leaving the capital undiminished. Much educational work, however, will be needed to secure this desirable end. The second report of the Forest Service suggest a forest law
